Award-winning renewable products

Handpicked for quality and performance

Quick installation from expert technicians

We guide you through the planning process

Heating your water with the power of the sun

Did you know that 30% of the payback from your solar panels comes directly from your hot water cylinder? Given that emphatic statistic, it's unsurprising that home owners investing in solar panels also opt for renewable hot water solutions.

After researching all the options, we've selected Copper Industries – the UK and Ireland's largest independent suppliers and manufacturers of hot water cylinders, calorifiers and buffer tanks – as our hot water partners.

Copper Industries' SolarPod cylinder syncs with your solar panels to heat water in your home, while their Hot Water Generator is customised to heat your swimming pool, saving your money and reducing your environmental impact.

We're also able to bring you other products from the incredible Copper Industries range, all of which are constructed from copper, which is both sustainable and environmentally friendly. Our experts will work with you to identify your precise needs and recommend a targeted solution that meets them.

This table outlines some of the key reasons that we've selected the SolarPod Cylinder and the Hot Water Generator to heat the water in your home – but please keep reading if you're looking for comprehensive technical specifications for both products.

SolarPod Cylinder

- ✓ Maximises return on your solar investment
- ✓ 10-year cylinder warranty
- ✓ Manufactured from Grade 2 copper
- ✓ High efficiency provided by 22mm compression

Hot Water Generator

- ✓ Fully customisable to your pool
- ✓ Fast, efficient and safe
- ✓ Ability to heat large volumes of water
- ✓ Compact so saves on space
